Mountain Weather Forecast

Ground Conditions Supplement

Date: Saturday 10 February Location: Helvellyn summit at 14:45 Temperature: plus 3.1 deg C Maximum wind speed 3.9mph Wind chill: plus 2.0 deg C Average wind speed: 2.7mph

Full report: A spring like day on the Lake District fells with lights winds and the freezing level well above the summits. Thursdays snow is thawing rapidly in the mild temperatures. Patchy new snow can be found above 600m with drifts behind features and in gullies up to 1 meter deep. However many areas including the Helvellyn plateau, some popular paths and the crests of the Helvellyn Edges are now clear. Caution is still required on Striding & Swirral Edges as many of the 'easier' paths on the flanks are still banked out with snow especially on northern aspects. There are a few areas of older snow above 900m of steep north through east facing aspects which require ice axe and crampons to cross but these shouldn't cause any hazard for walkers on popular routes. A surprising amount of ice has formed on the east face of Helvellyn above 800m but no climbing routes are currently in. Microspikes and trekking poles or an ice axe are strongly recommended for anyone heading onto the summits giving you plenty of options for dealing with the wide variety of underfoot conditions that currently exist. The freezing level is forecast to drop on Sunday evening which will quickly refreeze the saturated snow giving far more serious conditions on which spikes will be essential. Despite the unseasonably warm temperatures full winter clothing is still required to enjoy the fells in comfort and safety. The very minimum should include a waterproof top & bottoms, warm layers, hats and gloves, a map & compass, headtorch and boots with plenty of grip.
